Bringing archived data to life

Arkivum:

Digital archiving
and preservation
solution

Arkivum provides a digital archiving solution for the preservation of special collection and scholarly output data.

We understand the importance of the safeguarding and preservation of our customers valuable assets, ensuring that they are not lost, corrupted or become obsolete.

Additionally, it is more important than ever to ensure that the many sources of data are consolidated into one easy to manage repository, and made easily accessible to customers, students and stakeholders.

The Arkivum solution is a long-term data management tool for preserving, safeguarding, discovering and ensuring usability of a wide range of content types. Our built-in and automated processes ensure the future accessibility of data for both born-digital and digitised material.

The role played by the Arkivum solution has been key to this, allowing us to better manage data as we scale up the volume being archived

Working with Arkivum has met ITMA's needs and provides assurance that their valuable digital assets are future proofed, and widely available for the long term.

A preservation solution that delivers value

100% data integrity guarantee

Confidence that your collections and research are secure for generations

Long-term accessibility

Ensure the right people can find and have access to the right data, when they need it

Usability

Digital preservation ensures the avoidance of file obsolescence

Removal of data silos

Our solution allows the consolidation of resources and assists in removing data silos

Fully managed service

Make preservation easy, greatly reducing the burden on smaller archiving teams

Scalability

A solution which scales to meet your data requirements, now and in the future

Our digital archiving and preservation solution

Our SaaS solution supports end-to-end flexible workflows for ingesting, validating, preserving, indexing, discovering, accessing and exporting digital assets.

The solution is aligned to data management best practice approaches including both FAIR and ALCOA+. It is also compliant with the Open Archival Information System (OAIS) standards,

The solution is comprised of;

- **Safeguarding:** content is securely protected via a process of ongoing validation and integrity checks, encryption in transit and at rest, and replicated in separate geographical locations.

- **Preservation:** automated digital preservation workflows including file format identification, characterisation, normalisation, validation and packaging.
- **Usability:** the ability to add varying types of metadata at the point of ingest, as well as permitting updates post-ingest depending on determined rules and validations.
- **Integration:** seamless integration with many institutional applications for records management, special collections, and scholarly outputs and research data.

In addition to our technology solution, our dedicated team of experts are adept at helping our customers overcome their specific data management challenges.
